PART 1 : DETAILS OF THE CONTRACTOR, CLIENT AND INSTALL	ATION	
DETAILS OF THE CONTRACTOR Registration No. ⁵⁰⁰⁸⁵⁸⁰⁰⁰ Branch No. O00 Trading Title: SES Electrical Contractors (UK) Ltd Address: Flat 4 Maynard Court, Fletcher Road, London	DETAILS OF THE CLIENT Contractor Reference Number (CRN): SES5320 Name: Katie Hobbs Address: 37 Heathfield Gardens, Top floor flat, LONDON	DETAILS OF THE INSTALLATION Occupier: Address: 37 Heathfield Gardens, Top floor flat, LONDON
Postcode: W4 5AW Tel No: 02075235373	Postcode: W4 4JU Tel No: N/A	Postcode: W4 4JU Tel No: N/A
PART 2 : PURPOSE OF THE REPORT		
Purpose for which this report is required: Property is going to become a ren	ntal	
Date(s) when inspection and testing was carried out: (22/10/2021) Records available: (vailable: (X Previous report date: (N/A)
PART 3 : SUMMARY OF THE CONDITION OF THE INSTALLATION	N	
	ulations some of the issues are as follows - The main intake is leaking reading on circuit 6 - 2/3 smoke alarms have expired - Single insulated IP4X not achieved at DB	
Estimated age of electrical installation: (20) years Evidence of	additions or alterations: (stallation is: Satisfactory* (<i>delete as appropriate</i>)
PART 4 : DECLARATION		
existing installation, hereby CERTIFY that the information in this report, including stated extent of the installation and the limitations on the inspection and testing. Name (capitals): RHYAN BEVAN	Signature:	
REVIEWED BY THE REGISTERED QUALIFIED SUPERVISOR FOR Name (capitals): BYRON SANDERS	IHE REGISTERED CONTRACTOR Signature: RSB	Date: 26/10/2021
*An unsatisfactory assessment indicates that dangerous (CODE C1) and/or potentially dang	gerous (CODE C2) conditions have been identified in PART 6, or that Further Investigation (L	

 This report is based on the model forms shown in Appendix 6 of BS 7671
 *Where appropriate

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT FOR THE PRIVATE RENTED SECTOR Small installations up to 100 A single phase supply

Issued in accordance with BS 7671: 2018 – Requirements for Electrical Installations

PART 7 : DETAILS AND LIMITATIONS OF THE INSPECTION AND TESTING	
The inspection and testing has been carried out in accordance with <i>BS 7671: 2018</i> , as amended. Cables concealed within trunking and conduits, or cables and conduits concealed under floors, in inaccessible roof spaces the building or underground, have not been visually inspected unless specifically agreed between the Client and the Inspector prior to inspection. Details of the installation covered by this report. 100% of number 37 top floor flat covered by this report	
Agreed limitations including the reasons, if any, on the inspection and testing: No inspection within walls floors or ceilings	
Agreed with (print name): KATIE HOBBS	
Extent of sampling: 25%	(see additional page No. <mark>N/A)</mark> (see additional page No. <mark>N/A)</mark>
Operational limitations including the reasons:None	(see additional page No. <mark>N/A</mark>)

PART 8: SUPPLY CHARACTERISTICS AND EARTHING ARRANGEMENTS

System type and earthing arrangements		Number and type of live conductors		Nature of supply parameters		
TN-C-S: (<u>N/A</u>) TN-S: (/) Other <i>(state)</i> : N/A	TT: (<u>N/A</u>)	AC 1-phase, 2-wire: (<u>N/A</u>)		Nominal line voltage to Earth, U_0 :	(230) V	⁽¹⁾ By enquiry, measurement, or
Supply protective device		Other (state): 3 phase 4 wire		Nominal frequency, f:	(⁵⁰) Hz	by calculation
(BS (EN) Non-verifiable		Confirmation of supply polarity:		Prospective fault current, $I_{pf}^{(1)*}$:	(^{0.54} () kA (<u>0.44</u>) Ω	
Туре: (N/A)	Rated current: (100) A	Other sources of supply (as detailed on attached schedule)	Page No:(N/A)	External loop impedance, <i>Z_e</i> ^{(1)*} :	(ידָדָיָאַ)	

PART 9 : PARTICULARS OF INSTALLATION REFERRED TO IN THIS REPORT

Means of Earthing	Main protective conductors	Main protective bonding connecti	ons	Main switch / Sw	vitch-fuse / Circuit-breaker /	RCD

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT FOR THE PRIVATE RENTED SECTOR **Small installations up to 100 A single phase supply** *Issued in accordance with BS 7671: 2018 – Requirements for Electrical Installations*

NOTES

List number and location of luminaires inspected

Bedroom spotlight Kitchen spotlight

NOTES FOR RECIPIENT

THIS ELECTRICAL CONDITION REPORT IS AN IMPORTANT AND VALUABLE DOCUMENT WHICH SHOULD BE RETAINED FOR FUTURE USE

The purpose of periodic inspection is to determine, so far as is reasonably practicable, whether an electrical installation is in a satisfactory condition for continued service. This report provides an assessment of the condition of the electrical installation identified overleaf at the time it was inspected and tested, taking into account the stated extent of the installation and the limitations of the inspection and testing.

This report has been issued in accordance with the national standard for the safety of electrical installations, *BS 7671: 2018 – Requirements for Electrical Installations.*

The report identifies any damage, deterioration, defects and/or conditions found by the inspector which may give rise to danger (see PART 6), together with any items for which improvement is recommended.

If you were the person ordering this report, but not the user of the installation, you should pass this report, or a full copy of it including these notes, the schedules and additional pages (if any), immediately to the user.

This report should be retained in a safe place and shown to any person inspecting or undertaking further work on the electrical installation in the future. If you later vacate the property, this report will provide the new user with an assessment of the condition of the electrical installation at the time the periodic inspection was carried out.

Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested every six months. For safety reasons it is important that this instruction is followed.

For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. NICEIC* recommends that you engage the services of an NICEIC Registered Contractor for the inspection.

The recommended date by which the next inspection should be carried out is stated in PART 5 of this report. There should also be a notice at or near the main switchboard or distribution board/consumer unit indicating when the next inspection of the installation is due.

Only an NICEIC Registered Contractor listed on the 'Registered Competent Person Electrical' register – visit www.electricalcompetentperson.co.uk – is authorised to issue this NICEIC Domestic Electrical Installation Condition Report For The Private Rented Sector. You should have received the report marked 'Original' and the Registered Contractor should have retained the report marked 'Duplicate'.

This report form is intended to be issued only for the purpose of reporting on the condition of an existing electrical installation and must not be issued to certify new electrical installation work including the replacement of a distribution board or consumer unit.

The report consists of at least six numbered pages. Additional numbered pages may have been provided to permit further relevant information relating to the installation to be recorded. For installations having more than one distribution board or more circuits than can be recorded on PART 12, one or more additional *Schedules of Circuit Details and Test Results* should form part of the report. The report is invalid if any of the schedules identified in PART 10 are missing. The report has a printed seven-digit serial number, which is traceable to the Registered Contractor to which it was supplied by NICEIC.

PART 7 (Details and limitations) should identify fully the extent of the installation covered by this report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.

Operational limitations may have been encountered during the inspection such as inability to gain access to parts of the installation or to an item of equipment. The inspector should have noted any such limitations in PART 7. It should be noted that the greater the limitations applying to a report, the less its value from the safety aspect.

A declaration should have been given by the inspector in PART 4 of the report. The declaration must reflect the statement given in PART 3, which summarises the observations and recommendations made in PART 6. Where one or more observations have been made in PART 6, the Classification code given to each by the inspector indicates the degree of urgency with which remedial action needs to be taken to restore the installation to a safe working condition.

Where the inspector has indicated an observation as code C1 (danger present) **the safety of those using the installation is at risk.** Wherever practicable, items classified as (C1) should be made safe on discovery, and it is recommended that a skilled person(s) competent in electrical installation work undertakes the necessary remedial work immediately.

Where the inspector has indicated an observation as code C2 (potentially dangerous) **the safety of those using the installation may be at risk**, and it is recommended that a skilled person(s) competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

Where the inspector has indicated that an item requires further investigation (FI), the investigation should be carried out without delay to determine whether danger or potential danger exists. For further guidance on the Classification codes, please see the reverse of page 2.

Where the installation can be supplied by more than one source, such as the public supply and a standby generator or microgenerator, this should be identified in PART 8 *Supply Characteristics and Earthing Arrangements*, and the *Schedules of Circuit Details and Test Results* (PART 12) compiled accordingly.

Where inadequacies in the intake equipment have been observed (Item 1 of PART 10), the person ordering the inspection should inform the distributor and/or supplier as appropriate.

Should the person ordering this report have reason to believe that it does not reasonably reflect the condition of the electrical installation reported on, that person should in the first instance raise the specific concerns in writing with the Registered Contractor. If the concerns remain unresolved, the person ordering this report may make a formal complaint to NICEIC, for which purpose a complaint form is available on request.

The complaints procedure offered by NICEIC is subject to certain terms and conditions, full details of which are available upon application. NICEIC does not investigate complaints relating to the operational performance of electrical installations (such as lighting levels), or to contractual or commercial issues (such as time or cost).

* NICEIC is operated by Certsure LLP, a partnership between the Electrical Contractors' Association and the charity, Electrical Safety First. NICEIC maintains and publishes registers of electrical contractors that it has assessed against particular scheme requirements (including the technical standard of electrical work).

GUIDANCE FOR RECIPIENTS ON THE CLASSIFICATION CODES Only one Classification code should be given for each recorded Observation

Classification code C1 (Danger present)

Where an observation has been given a Classification code C1, the safety of those using the installation is at risk and immediate remedial action is required.

The person responsible for the maintenance of the installation is advised to take action without delay to remedy the observed deficiency in the installation, or to take other appropriate action (such as switching off and isolating the affected part(s) of the installation) to remove the danger. The NICEIC Registered Contractor issuing this report will be able to provide further advice.

NICEIC makes available 'Electrical Danger Notification' forms to enable inspectors to record, and then to communicate to the person ordering the report, any dangerous condition discovered.

Classification code C2 (Potentially dangerous)

Classification code C2 indicates that, whilst those using the installation may not be at immediate risk, urgent remedial action is required to remove potential danger. The NICEIC Registered Contractor issuing this report will be able to provide further advice.

It is important to note that the recommendation given at PART 5 of this report (Next Inspection) for the maximum interval until the next inspection is conditional upon all items which have been given a Classification code C1 and code C2 being remedied immediately and as a matter of urgency, respectively.

It would not be reasonable for the inspector to indicate that the installation is in a satisfactory condition if any observation in this report has been given a code C1 or code C2 classification.

Classification code C3 (Improvement recommended)

Where an observation has been given a Classification code C3, the inspection and/or testing has revealed a non-compliance with the current safety standard which, whilst not presenting immediate or potential danger, would result in a significant safety improvement if remedied. Careful consideration should be given to the safety benefits of improving these aspects of the installation. The NICEIC Registered Contractor issuing this report will be able to provide further advice.

Code FI (Further investigation required without delay)

It should usually be possible for the inspector to attribute a Classification code to each observation without indicating a need for further investigation.

However, where 'FI' has been entered against an observation the inspector considers that further investigation of that observation is likely to reveal danger or potential danger that, due to the agreed extent or limitations of the inspection and/or testing, could not be fully identified at the time.

It would not be appropriate for the inspector to indicate that the installation is in a satisfactory condition if there is reasonable doubt as to whether danger or potential danger exists. Consequently, where the inspector has indicated 'Further investigation required without delay' (FI) the overall assessment of the installation (PART 3) should be marked as 'Unsatisfactory'.

If the inspector has indicated that an observation requires further investigation without delay, the person ordering this report is advised to arrange for the NICEIC Registered Contractor issuing the report (or another skilled person or persons competent in such work) to undertake further examination of that aspect of the installation as a matter of urgency, to determine whether or not danger or potential danger exists.

Further information

Further information on the application of Classification codes, primarily aimed at inspectors but of possible interest to persons ordering condition reports, can be found in Electrical Safety First's Best Practice Guide No 4 *Electrical installation condition reporting: Classification Codes for domestic and similar electrical installations*. The guide can be viewed or downloaded free of charge from www.electricalsafetyfirst.org.uk
